SATELLITE GIS DATA WITH HIGH PRECISION

In 2015, our company began to develop technology for 3D map production. After two years, we can say: **we can produce 3D maps of any region of the world**, using cartographic companies and customer's data in combination with GIS terrain data from the satellite.

We offer **3D maps development and production** in formats from 10cm * 6cm to 1.189m * 841mm (A0).

Equipment and technology are unique.

We have developed and manufactured the equipment.

We do ourselves: the whole process of file preparation, the mould design and milling for production, the printing process.

We also produce:

- educational visual aid materials in 3D format
- advertising stands up to A0 format with 3D effects
- Braille features
- Large format 3D packaging
